Fault Analysis Report

PAUB-19691 Expiration Issues

This version delivers a fix to a known issue that spawned a deep investigation over the course of weeks, which caused the system to allow the cache database to grow above the defined threshold. The effect of this issue was that sometimes a gradual decrease in Cache-Out was observed until the expiration job was executed again. During this time, the Disk Utilization percentages also grew beyond the configured limit. The root cause of the issue was eventually discovered and promptly fixed, completely solving the issue..

Stability Improvements

PeerApp is constantly improving its testing methods, which allows us to detect potential stability issues before they are reported by customers. As a result of this initiative, this release includes improvements for overall stability of the product.
